TDS & Conductivity Meter

PH Meter :

Ideal For all pH testing , water purification application , wastewater regulation , aquaculture , hydroponics , colloidal silver , labs & scientific testing , pools & spas , ecology testing boilers & cooling tower , water treatment & agriculture.

TDS Meter :

Total Dissolved Solids (TDS) are the total amount of mobile charged ions , including minerals , salts or metals dissolved in a given volume of water , expressed in units of mg per unit volume of water (mg/L) , Also referred to as parts per million (ppm). TDS is directly related to the purity of water and the quality of water purification systems.

Conductivity Meter :

It is used for measuring the electrical conductivity of a solution. It works by applying voltages between two or more electrodes as a gauge of how many ions are in solution. Be aware that meters may give readings in E.C. , C.F. of ppm and some meters may do all three.

Macleod Gauges

The Mcleod gauge is a scientific instrument used to measure very low Pressure , down to 10-6 mbar.

The Mcleod gauge is used to measure vacuum by measuring the hight of a column of mercury supported by the gas whose pressure is to be measured , when this gas is trapped and compressed into a capillary tube.
